Interface / range of functions

	... CSD	... COD
Configuration from Motion Manager 5.0	RS232	CANopen
Fieldbus	RS232	CANopen
Operating modes (CSD)	Position/speed/torque control via interface or analogue set value specification. Operation as servo amplifier in voltage controller mode.	
Operating modes (COD)	Profile Position Mode (PP), Profile Velocity Mode (PV), Homing Mode, Cyclic Synchronous Position Mode (CSP)	
Speed range	see motor diagram	
Application programs, (CSD)	Command sequences from movement and control commands can be placed directly into the controller as user programs.	
Additional functions	Enables stand-alone operation without a connected communication interface. Overload protection for electronics and motor, self-protection from overheating, over-voltage protection in generator mode.	

Note:

The display shows the range of possible operation points of the drives at a given ambient temperature of 22°C.

The diagram indicates the recommended speed in relation to the available torque at the output shaft.

It includes the assembly on a plastic- as well as on a metal flange (assembly method: IM B 5).

The nominal voltage linear slope describes the maximal achievable operating points at nominal voltage.

Any points of operation above this linear slope will require a supply voltage $U_{mot} > U_N$.
