Characteristics

These incremental encoders with 3 output channels, in combination with the FAULHABER Motors, are used for the indication and control of both shaft velocity and direction of rotation as well as for positioning.

A permanent magnet on the shaft creates a moving magnetic field which is captured using an angular sensor and further processed. At the encoder outputs, two 90° phase-shifted square wave signals are available with up to 1 024 impulses and an index impulse per motor revolution.

The Line Driver version has differential signal outputs (TIA-422). Differential signals reduce ambient interference and are suitable for applications with high ambient interference.

The Line Driver amplifies the encoder signal which means that long cables can be used without signal degradation. Differential signal outputs must be decoded by the appropriate receiver module. In addition, a suitable line termination resistance (100 ohm) is possibly useful.

The encoder is available in a variety of different resolutions. The encoder is connected with a ribbon cable.

Connector information / Variants

Example product designation: 2444S024B-K1838 IE3-1024L

Option	Type	Description
3806	Connector 	for combination with DC-Motors series CR, CXR and with Brushless DC-Motor series B(S), BP4 and BXT H. Connector variants AWG 28 / PVC ribbon cable with connector EN 60603-13 / DIN-41651.
3589	Connector 	for combination with Brushless DC-Motors series BX4. Connector variants AWG 28 / PVC ribbon cable with connector EN 60603-13 / DIN-41651. Inclusive motor connector 3830
	Resolutions	Resolutions from 1 - 1024 lines per revolution are available by request.

Connection Encoder

No.	Function
1	N.C.
2	U_{DD}
3	GND
4	N.C.
5	Channel \bar{A}
6	Channel A
7	Channel \bar{B}
8	Channel B
9	Channel \bar{I}
10	Channel I

Standard cable
PVC-ribbon cable, 10-AWG 28, 1,27 mm

Caution:
Incorrect lead connection will damage the motor electronics!
In combination with the BX4 brushless DC-servomotors with digital Hall sensors, the sensor supply connections of encoder and motor are connected to each other.
